# VIRTUAL REALITY EXPOSURE THERAPY

IMMERSIVE TOOLS FOR FASTER, SAFER  
PTSD TREATMENT

## Introduction

PTSD treatment in Canada works, but access is slow and exposure therapy often relies on imagination alone. Praetorian Studios is creating AI-powered virtual reality tools that let therapists safely guide patients through personalized trauma scenarios using affordable VR headsets—improving engagement, precision, and access to care.

## About Us

Founded by former military SOF medic Peter Milne, Praetorian Studios blends trauma insight, game-engine expertise, and AI innovation. Working with Canadian psychologists and researchers, we're building an accessible VR tool that enhances Prolonged Exposure therapy and supports better outcomes for people living with PTSD.

## Key Features:

- Individualized VR scenarios
- Clinician-controlled exposure
- Runs on consumer-grade hardware
- Enhances trauma-focused therapy
- Affordable for clinics
- Easy scalability
